

REACH COMPLIANCE STATEMENT

19th, march 2021

Dear customers,

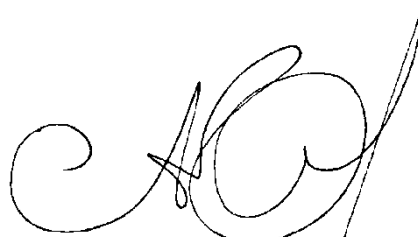

The EU regulation on Registration, Evaluation, Authorization and Restrictions of Chemicals also known as REACH (EC 1907/2006) came into force in June 1st, 2007.

This legislation not only aims to improve human health and environment protection but also to maintain European chemical industry competitiveness by limiting the use of dangerous products and inciting innovation.

As a manufacturer of components used for HF communication, Deti is fully aware of the requirements of REACH. Consequently, DETI constantly analyse its products content to check the presence of any substances mentioned in the latest EU SVHC Candidate List. Our analysis relies on our suppliers' data.

As a result, Lead (CAS 7439-92-1), added in the SVHC list in June 2018, can be found in some of our products and particularly in copper and steel alloys of connectors or resistors. For more information, our customer can ask for the detailed REACH certificate of products ordered.

Sincerely,

Aude PICARD
Chairperson
